
A beautiful 1.1 acre site with FPP west Ireland

Posted by DJ1950 - 2008/11/09 15:01

We have built a beautiful energy-efficient eco-house on the west coast of Ireland and invite you to come and do the same. We have a site for sale next to ours with Full Planning Permission to build a four bedroom dormer style house. The site is 1.1 acres consisting of 0.6 acres of woodland. It also includes a small orchard, a polytunnel and a workshop/chalet comprising 25sqm, which is highly upgradeable so as to facilitate further accommodation. The gravel driveway, front wall and entrance are already established. The site is situated down a very quiet country road 5 miles from the thriving town of Gort. We are offering this land for the very reasonable price of 90,000 Euros. <http://ecomotive.org/images/fbfiles/images/pic1.jpg> This is extremely good value and sites with this much land and development do not come along very often!

Our eco-house was featured in The Sunday Times . Also visit our house site and read our Blog on how we built our own house. We would be very willing to help the right buyer to build their own eco-house. This advice would be free and offered in the spirit of good-will. If you wish we can advise you on all aspects of building green in the west of Ireland, including the best materials, trades-people and energy-efficient systems...

I like the idea of eco-houses being built today to help save energy and be not a burden to the environment. I wonder how is your heating system during cold seasons? Ireland is famous for their romantic and beautiful fireplace, I hope your houses are equipped with modern facilities to combat the cold seasons.
